## Mr Magic Automation

Mr Magic is an Australian owned and operated company developing touchfree carwash technology, uniquely designed for Australian cars and Australian conditions. Operating since 1995, Mr Magic has been at the forefront of brushless car wash design, development, testing, manufacturing and integration.

With the development of Australia's only purpose built in bay Automatic Touch Free carwash system, there is no risk of scratches, marks or dints to vehicles. The Mr Magic Corporation has evolved and grown with each year of steady development; to now having two manufacturing sites, Head Office in Burleigh Heads Queensland, and a Regional Office in Warrnambool Victoria.

The Mr Magic touchless carwash is designed in Australia for Australian conditions. In our many years of experience, we have proved that Australia's harsh conditions demand a special approach. To this end, we have developed fabrication and design techniques that optimize the functionality and complete effectiveness of the Mr Magic automatic carwash equipment. Australian owned and operated means that you are dealing with a company that is accessible and responsive to the conditions that Australian car wash owners find themselves operating in.

The Mr Magic carwash equipment is generating healthy profits for lucky owners in over 120 sites Australia wide. And with operating in this large and diverse spread of conditions, ensures our constant product improvement is tied to solid objective operator feedback. Improvement is one of the many things that Mr Magic touchfree wash has become synonymous for.

### HEAD OFFICE

1/46 Township Drive  
Burleigh Heads  
Queensland 4220

Ph: 07 55353911 Fax: 07 55353211  
Email: [info@mrmagic.com.au](mailto:info@mrmagic.com.au)  
[www.mrmagic.com.au](http://www.mrmagic.com.au)

### Touch Free Wash

High pressure Turbo Heads with oscillating jets mounted on a profiled wash boom traverse the front, sides and rear of the vehicle, placing the water jet to agitate all surfaces and completely remove all built up dirt and grime, all without touching the vehicle surface.

### High Pressure Agitation

The vehicle is agitated clean with the oscillating action and the high pressure water impacting upon the vehicles surface. Strategically placed Turbo heads deliver this high pressure, high energy water jet. The Turbo heads with 25 degree oscillation, ensure that brushless carwash's achieve a superior wash by delivering the correct water jet profile onto the entire vehicle surface, not simply just a spray of water.

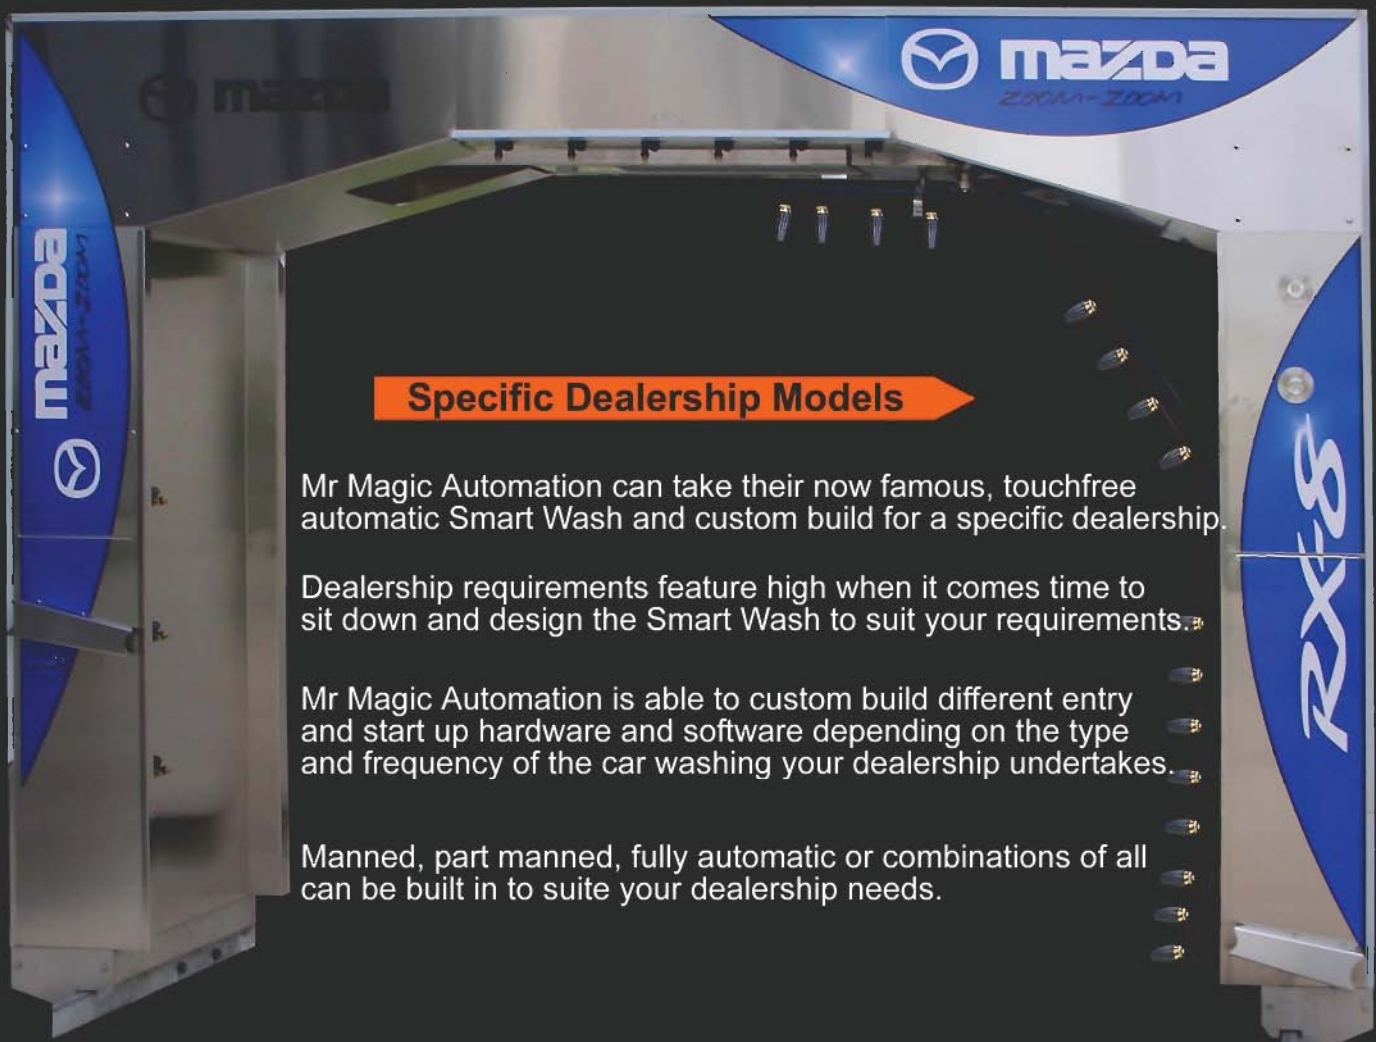

### Wash Process

Smart Wash uses laser optics to measure and size the vehicle, ensuring that the entire vehicle receives the close up high pressure agitation needed to obtain a complete wash. The complete washing of a vehicle utilizes a Pre-Soak cycle, high pressure wash cycle, wax cycle and a spot free cycle.

## Mr Magic Automation

### Specific Dealership Models

Mr Magic Automation can take their now famous, touchfree automatic Smart Wash and custom build for a specific dealership.

Dealership requirements feature high when it comes time to sit down and design the Smart Wash to suit your requirements.

Mr Magic Automation is able to custom build different entry and start up hardware and software depending on the type and frequency of the car washing your dealership undertakes.

Manned, part manned, fully automatic or combinations of all can be built in to suite your dealership needs.

### Pre-Soak / Wax / Spot Free

Pre-Soak, Wax & Spot Free delivery is achieved with nozzles that are independent of each other and independent of the high pressure delivery. This provides a delivery method that is both effective and highly efficient. (No wastage due to product dumping).

### Water Usage

Customizing wash design to your needs also allows for the water usage to meet the level that your dealership operates under. It can be as little as 70Ltrs per vehicle. No need to fit expensive recycling units.
